

## Lighting Designer - Entry Level

---

Dark Light Design, an award winning architectural lighting practice with offices in Seattle and St. Louis, is seeking an entry level lighting designer. We work collaboratively within our studio and alongside our clients to create lighting that enhances the experience of spaces across a broad range of project types and sizes – from treehouses to city-wide planning exercises.

You: have a strong sense of design, think conceptually about light as it relates to materials and space, have a demonstrated interest in/desire to learn about light, communicate well, care about your work, are well-organized and self-directed. You will use your skills to help establish design criteria, enhance sustainable design efforts, and support documentation efforts, while working in concert with a team of skilled designers from concept stage through construction.

We: provide a competitive salary and benefits, a supportive team environment, hands-on experience, interesting work, and the opportunity for growth.

Knowledge of AutoCAD, Revit, Adobe Creative Suite, and Microsoft Office applications is required, Rhino ability is a plus. Bachelor's degree in Architecture, Interior Design, Architectural Engineering, or Theatrical Lighting is desired.

Applicants must be authorized to work legally in the United States. Please send a cover letter, resume, and PDF or link to your portfolio to: [careers@darklight-design.com](mailto:careers@darklight-design.com).

Because we are a small independent practice, you will be working and collaborating with clients from the beginning, so good verbal, written, and visual communication skills are imperative. This is a great opportunity for a motivated individual to have a direct impact on design early in their career as part of a collaborative team!
